County Validation Checks: - Total County Votes: 490704

Vermont Senate Results

Overall State Totals

last	party	votes	winner	percentage
Sanders	Ind	229429	X	66.3%
Malloy	GOP	116512	NA	33.7%

Overall Validation Checks: - Percent sum: 100 % - Total votes: 345941

County/Township Demographics

County.Township	Income	Black_Pop	Hispanic_Pop	Votes
Burlington city	64931	1656	1457	19324
South Burlington city	90410	383	615	11822
Colchester town	90694	440	556	9091
Rutland city	53304	100	335	7099
Essex town	96799	652	377	6803

County Validation Checks: - Total County Votes: 345941

I used Gemini, chat link: <https://gemini.google.com/app/933ebbb21f235908>

I input verbal descriptions of what I want to achieve and ask it for brainstorming ideas and approaches. I check the code output by trying it and visualizing output segment by segment, I also ask it to explain the output code line by line so I'm not blindly copy pasting, but learning the code and understanding each line and function's purpose. There were many redundancies in code that was given as feedback, I also made changes to the code to better fit the structure of the data. I also often edited and reformatted for personal consistency and preference, removing identical library blocks and data blocks. Some errors I've encountered and fixed, I first failed to take into consideration that for senate results, some states had township instead of county, which was later updated with a new `sub_df_sen` line. I later decided to include the winner and percentage for each overall state total tables, this way we can also validate that there is one winner among all the candidates, and that the percentage adds up to 100%. I also validated by double checking between sites for accurate information and representation. I worked on this assignment on and off throughout the weeks, intensifying to around 5 hours everyday since the Friday before the deadline.
